| Description | A spaced thread fastener with a head that has a gently rounded top, cylindrical sides and a flat bearing surface that is $90^{\circ}$ to the screw's shank. <br> When compared to a Plastite®-alternative thread rolling screw, the PT®-alternative threads are wider and have a sharper angle. Furthermore, <br> the core of the shank has a reduced diameter between each consecutive set of threads. The point opposite the head lis blunt. |  |
| :---: | :---: | :---: |
| Applications/ <br> Advantages | Designed to form its own thread in thermoplastic materials. The $30^{\circ}$ thread angle reduces the outward expansion of the material being <br> displaced. The recessed design of the thread root enables more material to flow into the area between threads. The depth of the thread pattern <br> increases the fastener's load carrying properties while resisting vibrations, thus resisting loosening. |  |
| Material | Steel | Stainless |
| Core Hardness | Diameters M3 \& smaller: Case-Hardened C1022 Steel <br> Diameters M3.5 and larger: Through-hardened C1022 Steel | A2 Stainless |
| Surface Hardness | HV $270-390$ | HV 450 min. |
